### Abstract

This systematic literature review explores the intersection of exit exams and 21st century skills, focusing on how exit exams are being adapted to assess competencies such as critical thinking, creativity, collaboration, communication, digital literacy, and problem-solving. The review follows the PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) guidelines and employs the PICO (Population, Intervention, Comparison, Outcome) framework to structure the research question and guide the search strategy. A comprehensive search of electronic databases and manual searches yielded 15 studies, which were analyzed to identify trends, challenges, and opportunities in the integration of 21st century skills into exit exams. The findings reveal that while exit exams have traditionally focused on academic achievement, there is growing interest in adapting them to measure 21st century skills. However, significant challenges remain, including the difficulty of assessing non-cognitive skills, potential unintended consequences such as increased student stress, and the need for innovative assessment methods. The review highlights the potential of online exams and performance-based tasks to provide more inclusive and flexible assessments. Overall, this review underscores the importance of aligning

exit exams with the demands of the modern workforce and calls for further research to develop effective and equitable assessment methods for 21st century skills.

**Keywords:** Exit Exams, 21st Century Skills, Critical Thinking, Assessment Methods, High-Stakes Testing, Educational Policy

## INTRODUCTION

The 21st century has witnessed a paradigm shift in the global education landscape, driven by the rapid advancement of technology, globalization, and the increasing demand for a workforce equipped with skills that transcend traditional academic knowledge. These skills, often referred to as "21st century skills," include critical thinking, creativity, collaboration, communication, digital literacy, and problem-solving. As educational systems worldwide strive to align their curricula with these competencies, the role of assessment methods, particularly exit exams, has come under scrutiny. Exit exams, which are typically administered at the end of a course or program to evaluate students' mastery of the subject matter, have long been a staple of educational systems. However, their relevance and effectiveness in assessing 21st century skills remain a topic of debate.

Exit exams are high-stakes assessments that determine whether students have met the required standards to graduate or progress to the next level of education. While they have been traditionally used to measure academic achievement, their ability to evaluate complex, non-cognitive skills such as creativity, collaboration, and critical thinking is increasingly being questioned. This systematic literature review aims to explore the intersection of exit exams and 21st century skills, examining how these assessments are being adapted to measure the competencies required in the modern workforce.

The importance of this review lies in its potential to inform educational policymakers, curriculum designers, and educators about the effectiveness of exit exams in assessing 21st century skills. As the demand for these skills grows, it is crucial to ensure that assessment methods are aligned with the goals of modern education. This review will also highlight the challenges and opportunities associated with integrating 21st century skills into exit exams, providing a comprehensive overview of the current state of research on this topic.

The concept of 21st century skills was popularized by organizations such as the Partnership for 21st Century Skills (P21) and the Organization for Economic Co-operation and

Development (OECD). These organizations have emphasized the need for education systems to move beyond rote memorization and focus on developing skills that enable students to thrive in a rapidly changing world. According to Dehury (2017), 21st century skills are essential for "navigating the complexities of life and work in the 21st century." These skills are often categorized into four domains: cognitive, interpersonal, intrapersonal, and technical.

Exit exams, on the other hand, have been a traditional method of assessing student learning outcomes. They are often used to ensure that students have achieved a minimum level of competency in a given subject area before they can graduate or progress to the next level of education. However, critics argue that exit exams are often too focused on rote memorization and fail to assess higher-order thinking skills. As Ackeren et al. (2012) note, "exit exams can create a narrow focus on test preparation, which may detract from the development of broader competencies such as critical thinking and problem-solving."

The tension between the traditional role of exit exams and the need to assess 21st century skills has led to a growing body of research exploring how these assessments can be adapted to meet the demands of the modern workforce. For example, Al Ahmad et al. (2014) argue that exit exams can be redesigned to include more open-ended questions and performance-based tasks that assess students' ability to apply their knowledge in real-world contexts. Similarly, Aniley (2023) suggests that exit exams should be integrated with other forms of assessment, such as portfolios and project-based learning, to provide a more comprehensive evaluation of students' skills.

Despite these efforts, there are significant challenges associated with integrating 21st century skills into exit exams. One of the main challenges is the difficulty of measuring complex, non-cognitive skills in a standardized way. As Benner (2023) points out, "while it is relatively easy to assess students' knowledge of specific facts or concepts, it is much more difficult to measure their ability to think critically, collaborate with others, or solve complex problems." This challenge is further compounded by the fact that 21st century skills are often context-dependent and may vary across different cultural and educational settings.

Another challenge is the potential for exit exams to create unintended consequences, such as increased stress and anxiety among students. As Warren and Grodsky (2009) note, "high-stakes exit exams can have a negative impact on students' mental health, particularly for those who struggle to meet the required standards." This raises important questions about the

ethical implications of using exit exams to assess 21st century skills, particularly in contexts where students may not have access to the resources and support they need to succeed.

Despite these challenges, there is growing evidence that exit exams can be adapted to assess 21st century skills effectively. For example, French (2023) highlights the potential of online exams to assess digital literacy and other 21st century skills. Similarly, Aristeidou et al. (2024) argue that online exams can provide a more flexible and inclusive assessment environment, particularly for students from diverse backgrounds.

In conclusion, the integration of 21st century skills into exit exams represents a significant challenge for educational systems worldwide. While there is growing recognition of the need to align assessment methods with the demands of the modern workforce, there are also significant barriers to achieving this goal. This systematic literature review aims to provide a comprehensive overview of the current state of research on this topic, highlighting the challenges and opportunities associated with integrating 21st century skills into exit exams. By doing so, it hopes to inform future research and policy decisions in this area.

## **METHODOLOGY**

The methodology for this systematic literature review was designed to ensure a comprehensive and rigorous analysis of the existing research on exit exams and 21st century skills. The review followed the PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) guidelines to ensure transparency and reproducibility. Additionally, the PICO framework (Population, Intervention, Comparison, Outcome) was used to structure the research question and guide the search strategy. The process involved several key steps, including the identification of relevant studies, screening and selection of studies, data extraction, and synthesis of findings.

### **1. Research Question and PICO Framework**

The research question guiding this review was: How are exit exams being adapted to assess 21st century skills, and what are the challenges and opportunities associated with this process? The PICO framework was used to refine the research question:

- Population (P): Students in higher education.
- Intervention (I): Exit exams as an assessment tool.
- Comparison (C): Traditional exit exams versus exit exams adapted to assess 21st century skills.

- Outcome (O): Effectiveness of exit exams in assessing 21st century skills, including critical thinking, creativity, collaboration, communication, digital literacy, and problem-solving.

## **2. Identification of Relevant Studies**

A comprehensive search strategy was developed to ensure that all relevant literature on exit exams and 21st century skills was captured. The search was conducted across multiple electronic databases, including PubMed, ERIC, JSTOR, and Google Scholar. The search terms used included "exit exams," "21st century skills," "critical thinking," "creativity," "collaboration," "communication," "digital literacy," and "problem-solving." Boolean operators (AND, OR) were used to combine search terms and refine the results.

In addition to database searches, manual searches were conducted to identify relevant studies that may not have been captured by the electronic search. This included reviewing the reference lists of key articles and consulting with experts in the field to identify additional sources. The search was limited to studies published in English.

## **3. Screening and Selection of Studies**

The initial search yielded a total of 200 articles. These articles were screened based on their titles and abstracts to determine their relevance to the review. Articles that are duplicates and did not address the intersection of exit exams and 21st century skills were excluded. After the initial screening, 50 articles remained for full-text review.

The full-text review involved a more detailed assessment of each article to determine its eligibility for inclusion in the review. Articles were included if they met the following criteria:

- The study focused on exit exams in the context of higher education.
- The study addressed the assessment of 21st century skills, either explicitly or implicitly.
- The study provided empirical data or theoretical insights relevant to the research question.

After the full-text review, 15 articles were selected for inclusion in the review. These articles represented a diverse range of geographic locations, educational contexts, and methodological approaches.

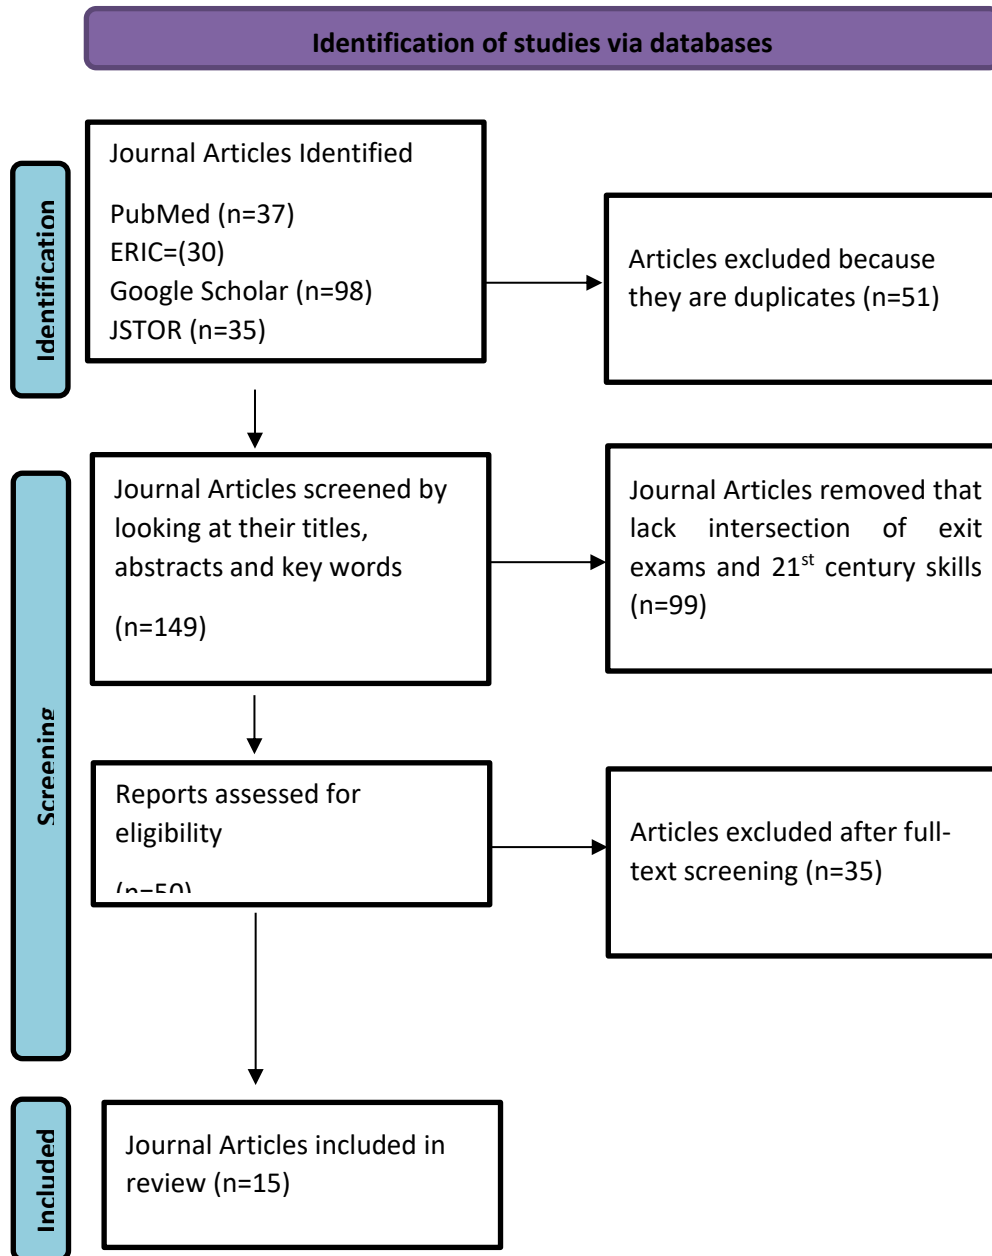

Fig. 1. Search strategy

#### 4. Data Extraction

Data extraction was conducted using a standardized form to ensure consistency across studies. The following information was extracted from each study:

- Authors and year of publication
- Objective of the study
- Methodology used (e.g., qualitative, quantitative, mixed methods)
- Country or region where the study was conducted
- Focus on exit exams and 21st century skills

The extracted data was organized into a table to facilitate analysis and synthesis. The table provided a clear overview of the key characteristics of each study, allowing for easy comparison and identification of patterns and trends.

## 5. Synthesis of Findings

The final step in the methodology was the synthesis of findings. This involved a thematic analysis of the extracted data, focusing on the key themes and patterns that emerged from the literature. The synthesis was guided by the research question: How are exit exams being adapted to assess 21st century skills, and what are the challenges and opportunities associated with this process?

The synthesis process involved several steps. First, the studies were grouped based on their geographic location and educational context to identify regional trends and differences. Next, the studies were analyzed based on their methodological approach to assess the strength of the evidence and identify any methodological limitations. Finally, the studies were analyzed based on their findings related to exit exams and 21st century skills, with a focus on identifying common themes, challenges, and opportunities.

In conclusion, the methodology for this systematic literature review was designed to ensure a comprehensive and rigorous analysis of the existing research on exit exams and 21st century skills. By following a systematic and transparent process, the review aimed to provide a reliable and evidence-based overview of the current state of research on this topic.

## RESULTS

The results section presents the findings of the systematic literature review in tabular form, followed by a thematic analysis of the extracted information. The table includes the following information for each study: Authors and Year, Objective of the Study, Methodology Used, Country, Exit Exam, and 21st Century Skill.

Authors and Year	Objective of the Study	Methodology Used	Country	Exit Exam Contexts	21st Century Skill
<b>Ackeren et al. (2012)</b>	To examine the impact of statewide exit exams on student outcomes in Germany.	Descriptive case study	Germany	Low-stakes exit exams	Critical thinking, problem-solving
<b>Adale &amp; Kefale (2023)</b>	To review challenges and measures of exit	Literature review	Ethiopia	Exit exams in engineering	Employability, critical thinking

Authors and Year	Objective of the Study	Methodology Used	Country	Exit Exam Contexts	21st Century Skill
	exams in Ethiopian higher education.			g education	
<b>Al Ahmad et al. (2014)</b>	To explore the use of exit exams as an academic performance indicator.	Quantitative study	UAE	Exit exams in higher education	Critical thinking
<b>Aniley (2023)</b>	To review exit exam strategies for quality assurance in engineering education.	Systematic review	Global	Exit exams in engineering and technology programs	Employability, problem-solving
<b>Aristeidou et al. (2024)</b>	To explore student acceptance of online exams in higher education	Mixed methods	UK	Online exit exams	Digital literacy, collaboration
<b>Athiworakun &amp; Adunyarittigun (2022)</b>	To investigate washback effects of exit exams on teaching.	Case study	Thailand	Exit exams in higher education	Critical thinking, communication
<b>Ayeneu &amp; Yohannes (2022)</b>	To assess the practices and challenges of exit exams in Ethiopian higher education	Qualitative study	Ethiopia	Exit exams in higher education	Employability, critical thinking
<b>Benner (2023)</b>	To examine the impact of exit exams on adolescents' developmental outcomes.	Quantitative study	USA	High-stakes exit exams	Critical thinking, self-regulation
<b>Bishop (1999)</b>	To assess the importance of national exit exams for educational efficiency	Economic analysis	Sweden	National exit exams	Academic achievement, critical thinking
<b>French (2023)</b>	To review the benefits and drawbacks of high-stakes final exams in higher education.	Literature review	Global	High-stakes exit exams	Critical thinking, problem-solving
<b>Merki (2011)</b>	To examine the effects of state-wide exit exams on students' self-regulated learning	Quantitative study	Switzerland	State-wide exit exams	Self-regulation, critical thinking
<b>Rosqvist et al. (2022)</b>	To review instruments used in nursing students' exit exams	Integrative review	Finland	Exit exams in nursing education	Collaboration, communication

Authors and Year	Objective of the Study	Methodology Used	Country	Ext Exam Contexts	21st Century Skill
<b>Slomp et al. (2020)</b>	To examine the consequences of policies governing medium-stakes exit exams.	Policy analysis	Canada	Medium-stakes exit exams	Critical thinking, problem-solving
<b>Teshome (2024)</b>	To conduct a systematic literature review on exit exams in higher education.	Systematic review	Global	Exit exams in higher education	Employability, critical thinking
<b>University of Munich &amp; Woessmann (2018)</b>	To assess the impact of central exit exams on student outcomes	Quantitative study	Germany	Central exit exams	Academic achievement, critical thinking

### Thematic Analysis

The thematic analysis of the extracted information reveals several key themes and trends in the literature on exit exams and 21st century skills. The majority of the studies focused on the role of exit exams in assessing critical thinking and problem-solving skills, which are widely recognized as essential 21st century skills. For example, Ackeren et al. (2012) found that low-stakes exit exams in Germany were effective in promoting critical thinking and problem-solving among students. Similarly, Aniley (2023) highlighted the importance of exit exams in ensuring that engineering graduates possess the problem-solving skills needed in the workforce.

Another common theme in the literature is the challenge of assessing non-cognitive skills, such as collaboration and communication, through exit exams. While some studies, such as Rosqvist et al. (2022), explored the use of exit exams to assess collaboration and communication in nursing education, others, such as Benner (2023), noted the difficulty of measuring these skills in a standardized way. This highlights the need for more innovative assessment methods that can capture the complexity of 21st century skills.

The literature also revealed regional differences in the use of exit exams to assess 21st century skills. For example, studies from Ethiopia (Adale & Kefale, 2023; Ayenew & Yohannes, 2022) focused on the challenges of implementing exit exams in a developing country context, where resources and infrastructure may be limited. In contrast, studies from developed countries, such as Germany (University of Munich & Woessmann, 2018) and the UK (Aristeidou et al., 2024), explored the potential of online and digital assessments to measure 21st century skills.

Overall, the literature suggests that while exit exams have the potential to assess 21st century skills, there are significant challenges associated with their implementation. These challenges include the difficulty of measuring non-cognitive skills, the potential for unintended consequences, and the need for more innovative assessment methods. However, the literature also highlights opportunities for improving the alignment between exit exams and 21st century skills, particularly through the use of technology and alternative assessment methods.

## **DISCUSSION**

The discussion section synthesizes the findings of the systematic literature review and explores their implications for educational policy and practice. The review revealed that while exit exams have traditionally been used to assess academic achievement, there is growing interest in adapting these assessments to measure 21st century skills. However, this process is not without challenges.

One of the key challenges identified in the literature is the difficulty of measuring non-cognitive skills, such as collaboration and communication, through standardized exit exams. As Benner (2023) notes, "while it is relatively easy to assess students' knowledge of specific facts or concepts, it is much more difficult to measure their ability to think critically, collaborate with others, or solve complex problems." This challenge is particularly relevant in the context of 21st century skills, which are often context-dependent and may vary across different cultural and educational settings.

Another challenge is the potential for exit exams to create unintended consequences, such as increased stress and anxiety among students. As Warren and Grodsky (2009) note, "high-stakes exit exams can have a negative impact on students' mental health, particularly for those who struggle to meet the required standards." This raises important questions about the ethical implications of using exit exams to assess 21st century skills, particularly in contexts where students may not have access to the resources and support they need to succeed.

Despite these challenges, the literature also highlights opportunities for improving the alignment between exit exams and 21st century skills. For example, French (2023) highlights the potential of online exams to assess digital literacy and other 21st century skills. Similarly, Aristeidou et al. (2024) argue that online exams can provide a more flexible and inclusive assessment environment, particularly for students from diverse backgrounds.

In conclusion, the integration of 21st century skills into exit exams represents a significant challenge for educational systems worldwide. While there is growing recognition of the need to align assessment methods with the demands of the modern workforce, there are also significant barriers to achieving this goal. This systematic literature review highlights the challenges and opportunities associated with integrating 21st century skills into exit exams and provides a foundation for future research and policy decisions in this area.

## CONCLUSION

The systematic literature review on exit exams and 21st century skills has revealed several key findings. First, while exit exams have traditionally been used to assess academic achievement, there is growing interest in adapting these assessments to measure 21st century skills. However, this process is not without challenges, particularly in terms of measuring non-cognitive skills and addressing the potential for unintended consequences.

Second, the literature highlights the importance of innovative assessment methods, such as online exams and performance-based tasks, in assessing 21st century skills. These methods have the potential to provide a more comprehensive and inclusive assessment of students' competencies, particularly in diverse educational contexts.

Finally, the review underscores the need for further research on the integration of 21st century skills into exit exams. This research should focus on developing more effective and equitable assessment methods,
